

STACKS & BREECHING FABRICATION

Tek-Mor Manufactures Custom Fabrication of Self-Supporting Stacks and Guided Stacks for the Commercial, Industrial and Automotive Industry. Stacks and Breechings are manufactured both as single and double wall.

We have been fabricating welded stacks and breeching for the past 18 years, both in design/build, and built to specifications. Some stacks and breechings are pre-insulated and pre-cladded ready for installation.

Hoisting/Installation

The installation is normally performed by crane. Hoisting by helicopter is performed if and when necessary.

Material Specification

Stainless Steel, Carbon Metal and Aluminized Steel are primarily used for the fabrication process. Based on the specification of the project, the customer will specify the type of metal.

Welding Process

A.W.S. D9.1 welding is used for various welded products such as Stacks, Breeching and Special Exhaust Systems.

Stacks and Breechings

Our Stacks and Breechings are professionally engineered by an Ontario Certified P. Eng.

- **Manufactured to SMACNA Design Standards**
- **Manufactured and Installed to NFPA-96**
- **A.W.S. D9.1 A QC Welding**

Our products are produced with precision high quality workmanship and built to customer specifications for industries such as:

Automotive • Industrial • Pharmaceutical • Commercial
Institutional • Hospitals • Colleges/Universities
Food/Beverage • Treatment Plants
